ABSTRACTED-PUB-NO: JP02160722A

BASIC-ABSTRACT:

Liposome prepn. contg. flavonoid is new. Cholesterol is opt. compounded in the liposomes. Pref. flavonoid is treated with an alkaline soln. (pH to less than 10) and formulated into liposomes. Pref. examples of flavonoid are flavone (e.g., chrysin, toringin, apigenin), flavanone (e.g., naringenin) or isoflavone (e.g., genistein, genistin).

USE/ADVANTAGE - This is useful as platelet-anticoagulant, vasodilator, antihistamic, anti-inflammatory, antispasmodic and scavenger of free radicals.

1. 1. liposome

Definition:

Small, artificially-created spheres whose walls are phospholipid bilayers. They are made by mixing dry phospholipids, such as egg yolk, in water. The lipid bilayer can fuse with the lipids in cell membranes, so liposomes hold much promise as agents for delivering drugs or other chemicals directly into cells.
